BIG NEWS

The FDA has approved silicone gel breast implants. If you are considering breast augmentation, the choices are silicone gel or saline implants. How do you know which is best for you? Let's look at the pros and cons of each.

Gel implants were removed from the market in 1992 due to concerns they may have caused some types of systemic illnesses. Long-term clinical studies demonstrated gel implants are safe. They give a softer, more natural feel and look with smoother contours and less rippling. However, they can leak and it is difficult and costly to detect. Gel implants may require a larger incision and they are more expensive.

Saline implants are well documented for their safety and reliability. They have been successfully used for nearly every breast augmentation over the last 14 years. During that time, breast augmentation has become one of the most popular procedures in plastic surgery.

We offer both saline and gel implants. During your consultation, we will help you make the right choice for your breast augmentation.

PLANNING MAKES PERFECT

When considering cosmetic surgery, careful planning can help reduce stress and aid in the healing process. With over 20 years of surgical experience, we have found these tips to be most helpful for our patients.

Surgical Procedures

Breast Augmentation

Breast Lift

Facelift

Rhinoplasty

Eyelid Surgery

Liposuction

Abdominoplasty

Thigh Lift

Body Lift

- You'll need 24-hour assistance for at least the first 2-3 days.
- Most people can resume normal activities in about a week.
- Best results are achieved when you are close to your ideal body weight.
- Breast surgery patients over 35 must have a recent mammogram.
- Don't hesitate to use your prescribed pain medication.
- Stock up on light, low sodium foods.
- Set up your recovery area so everything you need is at your fingertips - phone, computer, TV, magazines, books, music, and post-op instructions.

Susan Meers, RN, MS

SUMMER MUST HAVES

There are three important products I personally use and recommend to every one of my patients based on the best technology and science available. They help prevent brown spots, wrinkles, and skin cancers. Girls (and guys), vigilant sun protection is the best way to prevent aging and keep our skin looking youthful!

Topical Antioxidants fortify skin cells against UV damage and the aging process. Apply a topical antioxidant each morning after cleansing and before sun block. Try *Prevage* or *Skinceuticals Vitamin C* line.

Sun Block should be part of your daily routine and *Anthelios* has the broadest range of UVA/B protection on the market today. Use it every morning under your makeup.

Waterproof Block such as *Sport by Skinceuticals* is the best for outdoor activities and prolonged exposure. Be sure to reapply every two hours!

LITTLE LIFTS GO A LONG WAY

New Advanced Injectable Techniques using Botox and fillers such as Restylane and Juvederm, offer non-surgical facial lifts with stellar results and no down time. Susan Meers and Carrie Clifford-Bennett were the first RN's in the region to be certified in these advanced techniques and offer their expert, artistic approach using these exciting new applications.

Botox has been applied with great success to relax creases on the forehead, crow's feet and between the eyebrows. New advanced applications can decrease fine lines around the mouth, chin bumpiness, vertical cords in the neck, and nasal laugh lines. With Botox, we can also make the upper lip fuller, raise corners of the mouth, and lift the brow.

Lip enhancement and raised mouth corners with Restylane

Fillers are currently used to make lips fuller and reduce nasal/cheek folds. Our new techniques can raise corners of the mouth and fill fine lines around it. Layering two fillers reduces deep folds and the fine creases within them. We can also use fillers to correct moderate nasal contours.

THE EYES HAVE IT

At last, your eyes can have the same great Obagi results! Introducing **Obagi Elastiderm** eye cream. Clinical studies show this patent pending combination of ingredients help reduce wrinkles and fine lines and increase firmness around the eye in as little as two weeks. It contains Malonic acid to stimulate collagen and replenish elastin and blueberry extract, a natural antioxidant that helps eliminate free radicals. We've tried it. We love it!

IN THE PINK

Jane Iredale's new spring makeup gives you a POP with the Power of Pink. The new **Think Pink** triple eye shadow does double duty as a blush. On the lip, you'll shine with the flirty **Cotton Candy** gloss or **Kirsten** lipstick. **Brush-Me-Bronze** is perfect for highlighting, contouring or bronzing. Come in today for a complimentary makeup consultation with any Jane Iredale purchase.

SERVICE EXTRAORDINAIRE

At Wells Skin Care, we strive to meet the service needs of all our clients. For your convenience we offer once a month Saturday services and after hours appointments. In order to reduce missed appointments, we have a new cancellation policy. Although we will continue to attempt to give you a courtesy reminder call 24 to 72 hours in advance of your scheduled service, please consider your appointment confirmed at the time it is made. Failing to cancel/reschedule your appointment 24 hours in advance will result in billing the charges for the time reserved for you. Thank you as we continue our goal of extraordinary service.
